PROJECT ABSTRACT SUBMISSION

COURSE: Adaptive Software Engineering Project (24CI3201)

A.Y. 2026 - 2027

TITLE OF THE PROJECT	EventConnect – Plan. Manage. Connect.	
S. No.	University ID	Name
1	2420030173	Raavi Jahnavi
2	2420030211	Maremanda Sai Kridhay Kumar
3	2420030556	Sri Hansika Saraf
4	2420030558	Bobbadhi Kundana Mani
Name of the Guide		G. Lavanya

Abstract

EvenConnect is a web-based Event Management and Registration System designed to simplify the planning, organization, and management of events through a centralized digital platform. Traditional event management processes often involve manual registration, poor communication, and inefficient tracking of participants and event schedules. EvenConnect addresses these challenges by providing an integrated system that enables users to browse events, register online, purchase tickets, receive event updates, and manage bookings efficiently.

The system supports multiple user roles, including Participants, Event Organizers, and Administrators. Organizers can create and manage events, monitor registrations, and oversee event schedules, while administrators manage users, event approvals, and overall system operations. Participants can explore upcoming events, register, make payments, and access their booking history through an intuitive interface. The project follows the Agile Scrum Software Development Life Cycle (SDLC), allowing iterative development through sprint planning and continuous improvement.

Development activities will be managed using Jira and GitHub, while Docker and Kubernetes will be used for containerization and deployment. Code quality and security will be ensured through SonarQube and OWASP ZAP, and the application will be deployed on a cloud platform such as AWS or Google Cloud. The proposed system aims to provide a secure, scalable, and user-friendly solution for efficient event management, reducing manual effort and improving the overall experience for organizers and participants
